

DollWow Web Storefront PRD

Plain-language, Codex-ready product requirements for DollWow.com

Team ownership and color key

Use these names in planning, assignments, and internal notes. Amit is orange. Jero is blue. Shared work uses gold.

Owner	Color	Primary responsibilities
Amit	Orange	Website, UX, Shopify/headless stack, product data, AI/search tooling, analytics, SEO execution, and technical build.
Jero	Blue	Supplier outreach, vendor authorizations, price lists, stock feeds, TDF/forum research, affiliate outreach, and supplier follow-up.
Amit + Jero	Gold	Direction, accounting rules, launch decisions, support standards, weekly KPI reviews, and first-order quality.

1. Product direction

DollWow is not positioned as a tech demo. It is a store that makes doll shopping easier, more personal, and less risky. The customer-facing promise is simple: find the right doll, compare options without jumping across sites, customize when needed, and buy with clear pricing, delivery, and human support.

Decision	Locked direction
Brand	DollWow.com
Main promise	A simpler way to find, compare, customize, and buy the right doll.
Customer language	Use plain terms. Avoid internal feature names and tech language.
Core MVP	Great storefront, curated catalog, Help Me Choose quiz, Compare a Listing tool, clear product pages, simple custom options.
Not MVP	Image search, full AI girlfriend, AI influencer program, complex 3D builder, full customer portal.
Tone	Premium, discreet, practical, warm, and human. No scammy discounts or gimmicky adult-site design.

2. Customer-facing labels

Do not overload the site with labels like Buy Passport, DollFit, Warehouse Radar, or Deal Desk. Those can be useful internally, but the site should feel simple to an older, high-ticket buyer.

Internal idea	Customer-facing label	What the customer sees
Fit quiz	Help Me Choose	A short quiz that recommends dolls based on budget, delivery needs, size, weight, storage, and preferences.
Comparison engine	Compare a Listing	Paste a product link from another site and DollWow helps compare price,

		specs, delivery, and our closest offer.
Product summary/passport	Doll Card or Doll Details	A clear summary of price, specs, delivery, stock/custom status, and support options.
Warehouse radar	Doll Warehouse	Ready-to-ship products with warehouse country, delivery estimate, and last updated note.
Character builder	Customize This Doll	Simple option sections on the product page. The buyer chooses material, skin, eyes, wig, skeleton, and factory options where available.
Concierge	Human Help	Ask questions before buying by chat, email, phone, or private form.

3. Target users and paths

Buyer type	What they need	Best path
Collector	Fast search by brand, height, body, head, material, or SKU.	Shop Dolls, search, filters, product page, checkout.
First-time buyer	Help choosing a size, weight, material, budget, and delivery path.	Help Me Choose, recommendations, product page, human help.
Comparison shopper	A way to compare a listing they found elsewhere.	Compare a Listing, result page, our closest match/quote, checkout or human help.
Ready-to-ship buyer	Clear local stock, fast delivery, and realistic delivery expectations.	Doll Warehouse, filters, product page, checkout.
Custom buyer	Clear option selection without emailing a form back and forth.	Customize This Doll on product page, Doll Card summary, checkout.
Privacy-sensitive buyer	Discreet support, shipping clarity, and reassurance after payment.	Product page, support CTA, checkout, order emails.

4. MVP information architecture

- Home: simple promise, main entry buttons, trust strip, best sellers, ready-to-ship preview, human help.
- Shop Dolls: normal catalog for buyers who already know what they want.
- Doll Warehouse: ready-to-ship inventory with location and last updated note.
- Help Me Choose: guided quiz with practical recommendations.
- Compare a Listing: paste a competitor product URL and receive a simple comparison.
- Customize: landing page explaining custom orders, then routes to custom product pages.
- Product page: product images, price, delivery, Doll Card, options, support, add to cart.
- Support pages: shipping, returns/replacements, discreet delivery, FAQ, contact.
- Trust pages: Why DollWow, authorized suppliers/brands, adult-only policy, reviews when real reviews exist.

5. Recommended stack

Layer	Choice	Reason
Frontend	Next.js App Router, TypeScript, React, Tailwind CSS	Modern custom storefront with fast pages, reusable components, and good Codex compatibility.
Hosting	Vercel	Fast deployment, previews, and established headless Shopify workflow.
Commerce backend	Shopify	Products, variants, collections, orders, payments, and checkout.

Commerce API	Shopify Storefront API	Fetch products/collections, create carts, add lines, then send buyer to Shopify checkout URL.
Admin integration	Shopify Admin GraphQL API	Product sync, admin workflows, supplier/import scripts, order operations where needed.
App database	Supabase Postgres	Store quiz sessions, comparison requests, parsed listings, product aliases, supplier metadata, stock timestamps, and leads.
AI/search	OpenAI Responses API with web_search where needed	Support Compare a Listing and product normalization. Cache results to control cost.
Email	Klaviyo, Shopify Email, or similar	Abandoned cart, quiz follow-up, compare follow-up, order communication, review request.

6. Key user flows

6.1 Collector flow

1. User lands on home or catalog.
2. User searches by brand, name, height, material, or SKU.
3. User opens product page.
4. User checks price, delivery, options, and support.
5. User adds to cart and is sent to Shopify checkout.

6.2 Help Me Choose flow

1. User clicks Help Me Choose.
2. Quiz asks budget, delivery speed, preferred material, desired type, size/weight comfort, storage, living setup, and customization appetite.
3. System recommends 3 to 5 products with plain reasons.
4. User can open product, compare recommendations, ask human help, or save/contact.

6.3 Compare a Listing flow

1. User pastes a product URL from another seller.
2. System fetches page data and extracts title, price, images, specs, vendor, and delivery claims where possible.
3. System searches for likely matching listings and checks DollWow catalog for matches or close alternatives.
4. Result page shows competitor listing, market prices found, DollWow match or closest offer, delivery/support differences, and confidence level.
5. If confidence is low, show a clear message: We found likely matches, but a human will verify before you pay.
6. User can request a quote, ask a question, or go to the matching product page.

6.4 Ready-to-ship flow

1. User opens Doll Warehouse.
2. Filters by warehouse country, price, material, height, weight, delivery speed, and type.
3. Each product card shows stock/custom status, warehouse, delivery estimate, and last updated note.
4. User opens product and checks out.

6.5 Custom flow

1. User opens a custom product or Customize section.
2. Product page displays option groups clearly, not as a giant confusing dropdown list.
3. Live Doll Card updates selected options, price, and delivery estimate where possible.
4. User can ask human help before checkout.
5. User completes checkout or quote request.

7. Feature requirements

Feature	Requirement
Home page	Show simple promise, 3 to 4 main actions, trust strip, ready-to-ship preview, featured products, human help. Avoid tech jargon.
Catalog pages	Fast filtering by brand, type, material, height, weight, price, stock/custom, warehouse, delivery time. Sort by price, newest, ready-to-ship, best match.
Product cards	Image, name, price, brand, height, weight, material, stock/custom badge, delivery estimate, quick compare/save.
Product page	Images, price, delivery, product options, Doll Card, add to cart, ask a question, comparison alternatives, clear policies.
Doll Card	Plain section showing specs, price, options, source/brand, delivery estimate, warehouse/custom status, QC note, support CTA. Later can be shareable with QR/check out link.
Help Me Choose	Questionnaire and recommendation engine. Do not ask for sensitive data that is not needed. Store only what is useful.
Compare a Listing	URL input, parser, AI normalization, web search where needed, catalog matching, result page, lead capture, manual fallback.
Doll Warehouse	Ready-to-ship page with last updated time, warehouse location, delivery estimate, and clear disclaimer if stock must be confirmed.
Customize This Doll	Option groups on PDP. Show summary and price changes. Avoid claiming AI visuals are exact delivered product.
Human Help	Persistent CTA for contact. Offer private recommendation, question, quote, or call request.
Checkout	Use Shopify cart and checkout. Keep custom storefront cart clean and send to Shopify checkoutUrl.
Reviews	Only real reviews. No fake review generation, no deceptive social proof, no invented buyer photos.

8. Data model

Shopify remains the source of truth for products, variants, carts, checkout, and orders. Supabase stores everything that is not naturally handled by Shopify or that is needed for DollWow-specific user experiences.

Table	Purpose	Core fields
products_extended	Extra product metadata not cleanly handled by Shopify.	shopify_product_id, brand, supplier, material, height_cm, weight_lb, cup_size, warehouse_country, stock_last_checked_at, custom_available, notes.
product_aliases	Improve search/matching for competitor listings.	product_id, alias_name, supplier_sku, old_site_name, competitor_title, image_hash_optional.
guided_sessions	Help Me Choose quiz data.	id, answers_json, recommended_product_ids, email_optional, created_at, consent_flags.
comparison_requests	Compare a Listing submissions.	id, input_url, customer_email_optional, parsed_title, parsed_price, parsed_vendor, status, confidence, result_json, created_at.
comparison_sources	Other listings found during comparison.	request_id, source_url, title, price, vendor, delivery_claim, match_notes.
stock_snapshots	Track ready-to-ship updates.	product_id, warehouse_country, supplier, quantity_or_status, last_checked_at, source.
support_leads	Human help requests.	id, source_flow, name_optional, email, question, product_ids, status, owner, created_at.
supplier_profiles	Supplier/brand operations data.	supplier, contact, authorization_status, price_list_status, asset_status, stock_feed_status, notes.

9. Compare a Listing, detailed logic

1. Validate the URL and block unsafe protocols or private network targets.
2. Fetch the page server-side. Prefer JSON-LD product data, Open Graph tags, meta title, visible title, price text, variant text, and images.
3. If static fetch fails, use a fallback fetcher later, such as a browser rendering service. Keep MVP simple first.
4. Normalize the extracted page into fields: title, brand, model, height, weight, material, cup size, price, currency, vendor, delivery claims, and image URLs.
5. Search the web only if needed. Use 1 to 3 focused searches based on title, brand, height, supplier clues, and exact phrases.
6. Match against DollWow catalog using title similarity, brand clues, height, weight, material, SKU/alias, and image similarity later if available.
7. Return confidence: high, medium, low. Never pretend a match is exact if it is uncertain.
8. Show clear next steps: view DollWow match, ask for human verification, or request a quote.

9. Cache by URL, extracted title, and normalized product key to reduce API/search cost.

Cost note: current OpenAI pricing lists web search at \$10 per 1,000 calls for web search or \$25 per 1,000 calls for non-reasoning web-search preview. A normal Compare a Listing lookup should use 1 to 3 searches plus model tokens, then cache results. Source: <https://developers.openai.com/api/docs/pricing>

10. Product page requirements

- Above the fold: product name, price, primary image, stock/custom badge, estimated delivery, material, height, weight, add to cart, ask a question.
- Doll Card: a simple details panel. This should not feel like a tech artifact.
- Options: use clear sections, for example skin, eyes, wig, skeleton, heating, standing feet, head/body options, add-ons.
- Delivery: show if it is ready-to-ship or custom, warehouse/factory country, and realistic time range.
- Trust: authorized brand/source note, support note, QC policy where applicable, return/replacement link.
- Alternatives: show closest ready-to-ship, lower price, premium, or lighter option where useful.
- Compare CTA: a small link, for example Found this somewhere else? Paste the link and we will compare it.

11. Frontend route map

Route	Page	Purpose
/	Home	Main promise and entry paths.
/shop	Shop Dolls	Catalog and filters.
/shop/[collection]	Collection page	Ready-to-ship, custom, brands, material, type collections.
/products/[handle]	Product page	Product details, options, Doll Card, cart.
/help-me-choose	Help Me Choose quiz	Guided selector.
/help-me-choose/results	Quiz results	Recommended products and next steps.
/compare	Compare a Listing	URL input and lead capture.
/compare/[id]	Comparison result	Parsed listing, matches, comparison, quote CTA.
/warehouse	Doll Warehouse	Ready-to-ship inventory.
/customize	Customize overview	Explains custom ordering and routes to custom products.
/cart	Cart	Custom storefront cart summary before Shopify checkout.
/support	Support	Contact, FAQ, order help.
/shipping	Shipping	Delivery, discreet shipping, customs notes.
/returns	Returns and replacements	Clear replacement/refund policy.
/why-dollwow	Why DollWow	Trust, human support, easier buying.

12. Suggested project structure for Codex

```
/app
  /(store)/page.tsx
  /(store)/shop/page.tsx
  /(store)/shop/[collection]/page.tsx
  /(store)/products/[handle]/page.tsx
  /(store)/warehouse/page.tsx
  /(store)/customize/page.tsx
  /help-me-choose/page.tsx
  /help-me-choose/results/page.tsx
```

```

/compare/page.tsx
/compare/[id]/page.tsx
/cart/page.tsx
/support/page.tsx
/api/compare/submit/route.ts
/api/compare/[id]/route.ts
/api/quiz/submit/route.ts
/api/cart/create/route.ts
/components
  Header.tsx
  Footer.tsx
  ProductCard.tsx
  ProductGrid.tsx
  ProductFilters.tsx
  ProductOptions.tsx
  DollDetailsCard.tsx
  HelpMeChooseQuiz.tsx
  CompareListingForm.tsx
  ComparisonResult.tsx
  WarehouseStatusBadge.tsx
  HumanHelpCTA.tsx
/lib
  shopify/storefront.ts
  shopify/admin.ts
  supabase/client.ts
  compare/fetchPage.ts
  compare/extractProduct.ts
  compare/searchWeb.ts
  compare/matchCatalog.ts
  quiz/recommendProducts.ts
  analytics/events.ts
/types
  product.ts
  comparison.ts
  quiz.ts
  shopify.ts
/scripts
  import-products.ts
  sync-shopify-products.ts
  sync-stock-snapshots.ts
  seed-supabase.ts

```

13. Environment variables

Variable	Purpose
NEXT_PUBLIC_SITE_URL	Canonical DollWow site URL.
SHOPIFY_STORE_DOMAIN	Shopify store domain.
SHOPIFY_STOREFRONT_ACCESS_TOKEN	Storefront API access token.
SHOPIFY_ADMIN_ACCESS_TOKEN	Admin API token for server-only use.
SUPABASE_URL	Supabase project URL.
SUPABASE_ANON_KEY	Public anon key for safe client use.
SUPABASE_SERVICE_ROLE_KEY	Server-only key for API routes and scripts.
OPENAI_API_KEY	Server-only key for comparison/search/normalization.
EMAIL_PROVIDER_API_KEY	Email provider if used.
GA_MEASUREMENT_ID	Analytics.

14. Codex implementation plan

Sprint	Codex task	Acceptance criteria
1	Scaffold Next.js app with routes, layout, Tailwind, env validation, and base	Home, shop, product, compare, help pages render locally and deploy to

	components.	Vercel.
1	Implement Shopify Storefront API client.	Can fetch products, collections, product by handle, create cart, add line, and open checkoutUrl.
1	Build product grid, filters, product cards, and product page.	At least sample products display correctly and add to cart works.
2	Build Help Me Choose quiz and results.	Quiz captures answers, stores session, returns 3 to 5 recommendations using simple rules.
2	Build Compare a Listing input and database flow.	User can paste URL, record is created, status page exists.
2	Implement URL fetch and product extraction.	System extracts title, price, images/specs when available, stores parsed result.
3	Implement web search and catalog matching.	Comparison result shows competitor listing, likely matches, confidence, and next steps.
3	Build Doll Warehouse page.	Ready-to-ship products show location, delivery estimate, and last updated note.
3	Add analytics and email hooks.	Track product views, quiz starts/completions, compare submissions, add to cart, checkout starts.
4	QA, accessibility, performance, and launch fixes.	Core flows work on desktop/mobile, no checkout blockers, no obvious slow pages.

15. Analytics events

Event	When it fires	Key properties
view_product	Product page load	product_id, brand, price, material, stock_status.
start_help_me_choose	Quiz start	entry_page.
complete_help_me_choose	Quiz completion	budget_range, delivery_preference, recommended_count.
submit_compare_listing	URL submitted	input_domain, has_email, source_page.
view_comparison_result	Comparison page viewed	request_id, confidence, matched_count.
ask_human_help	Support CTA clicked/submitted	source_flow, product_id_optional.
add_to_cart	Cart line added	product_id, variant_id, price.
begin_checkout	Checkout URL clicked	cart_value, line_count.

16. Acceptance criteria

- A buyer can browse products, filter, open a product page, configure available options, add to cart, and reach Shopify checkout.
- A first-time buyer can complete Help Me Choose and receive useful recommendations without needing to understand all brands.
- A comparison shopper can paste a listing URL and receive either a useful automated result or a clear human-verification fallback.
- Ready-to-ship products clearly show warehouse location, delivery expectation, and stock update note.
- Product pages use plain language and do not overuse internal feature names.
- All adult-only/compliance copy is present. No underage-coded categories or language.
- No fake reviews, fake testimonials, or invented social proof are used.

- All key events are tracked, and weekly KPIs can be reviewed.
- Site loads acceptably on mobile and desktop, and checkout has no blockers.

17. Later roadmap

- Image matching once catalog and image index are large enough.
- More visual custom builder for top brands and bodies.
- Shareable Doll Card with QR/direct checkout link.
- Account area for saved products, saved comparisons, stock alerts, and order notes.
- More automated supplier stock feed ingestion.
- AI-powered product search using natural language.
- Post-purchase companion/support layer only after ecommerce flow is proven.

19. Locked visual design and UI direction for Codex

Use this section as the source of truth for the first DollWow build. The current PRD already covers product flows and plain-language labels; this addendum locks the premium black/gold look, homepage structure, configurable product page direction, LIVE Price Comparison, Help Me Choose, Doll Warehouse, and Doll Passport presentation.

Owner color key for internal planning only: Amit = orange. Jero = blue. Shared work = gold. Do not use these owner colors as the customer-facing brand palette.

19.1 Brand look and design tokens

Design direction: premium black and gold, warm, discreet, high-ticket, and easy to read for buyers over 50. Avoid neon pink/magenta as the primary brand color. The site should feel more like a luxury buying concierge than a generic adult store.

Element	Direction	Suggested tokens	Codex notes
Background	Deep black / charcoal	#050505, #0B0A08,	Use subtle gradients, not

		#11100E	flat gray.
Cards / panels	Soft black glass panels	#15120D, #1A1713	Rounded 16-24px, low-opacity gold borders.
Primary accent	Warm luxury gold	#D8B15A, #F2C766, #FFE1A3	Use for primary CTAs, logo accent, icons, price highlights.
Text	Ivory and muted beige	#F7F2E8, #C7BFAE, #8F8779	Large readable type, high contrast.
Success	Subtle green for stock only	#24B36B	Use for in-stock badges and checks.
Error / warning	Muted red/amber	#D65A5A, #C9872D	Use sparingly.

- Typography: pair a premium serif or high-contrast display font for hero headlines with a clean sans-serif for body/UI. Keep nav and forms simple and legible.
- Buttons: primary buttons are gold with dark text. Secondary buttons are dark/transparent with gold border. Avoid aggressive discount-style red buttons.
- Imagery: use tasteful premium product/editorial imagery. No underage-coded styling, school themes, teen language, or misleading AI-generated product claims.
- Layout: dark hero, strong left headline, right-side Compare card, trust strip, product carousel, ready-to-ship section, help section, footer.
- Mobile: stack hero content, keep CTAs above the fold, make Compare and Help Me Choose easy thumb targets, and use sticky Add to Cart on product pages.

Homepage visual reference: premium black/gold direction

DollWow PRD, working draft

Reference only: use the black/gold premium mood, clear top navigation, left hero promise, right-side listing comparison card, trust strip, and handpicked product carousel.

19.2 Homepage structure

- Top bar/nav: DollWow logo in gold/ivory, nav links: Shop Dolls, Help Me Choose, Compare, Warehouse, Customize, About Us. Right side: search, account, cart, help/order tracking where practical.
- Hero copy direction: keep it simple. Example: “Find her. Compare. Enjoy.” or “Find the right doll. Get the best deal. Buy with confidence.”
- Hero actions: primary “Shop Dolls”, secondary “Compare a Listing”, tertiary “Help Me Choose”.
- Right hero card: “Paste a listing link from any website” with URL input and “Compare Now” button. Mention benefits in plain language: find better prices, see your options, save time and money, get expert help.
- Trust strip: Best price match, verified sources, discreet shipping, human support. Short labels only, no long paragraphs.
- Product carousel: Handpicked Favorites or Popular Right Now. Cards show image, brand/name, price, stock/custom badge, rating only if real, and quick view.
- Secondary sections: Help Me Choose, Doll Warehouse, Customize Your Doll, Support/Privacy, email signup, footer policies.

19.3 LIVE Price Comparison tool

Customer-facing name: LIVE Price Comparison. It can be called “live” on the site, but every price row must show freshness: “Last checked: today / 2 days ago / 3 days ago.” Add a small note: “Prices may change. We verify before checkout.”

- Primary use case: customer pastes a competitor product URL, or selects suggested competitor sites from approved vendors.
- Default product-page use case: show approved competitor comparisons from our database when a strong match exists.
- Only compare against approved vendors for automatic price matching. Unknown vendors should show “needs review” or “we can check this for you.”
- Use total price where possible: product price + shipping + required fees. If shipping is unclear, show “shipping unclear” instead of pretending certainty.
- Do not rely on competitor doll names. Match by brand + material/tier + height + body/cup size + SKU/body/head code when available + image similarity + title similarity.
- Auto coupon generation comes after match confidence and margin checks. Use Shopify discount codes that expire and apply only to the matched product/variant.

19.4 Help Me Choose quiz

- Keep it short: 6-8 practical questions max. Ask budget, delivery speed, material preference, desired body type, size/weight comfort, storage/living setup, customization needs, and experience level.
- Avoid asking sensitive or unnecessary personal data. The value is practical fit: size, weight, storage, delivery, and ease of handling.
- Results page should recommend 3-5 dolls with plain reasons: best fast option, best custom option, best value, best lighter/easier option, best premium option where relevant.
- Every result should include price, delivery estimate, height/weight, material, and a clear next step: View Doll, Compare Prices, Ask Human Help.

19.5 Product page and custom options UI

Use the **bouquet-builder reference as the direction for customizable dolls**. Do not build a full character creator for MVP. Build a beautiful configurable product page with option groups, live selected-items summary, live price, and clear Add to Cart.

Reference only: large visual/product area, simple left-side option categories, right-side option selector, bottom selected-items strip, live price, Add to Cart.

- Desktop layout: left large image/gallery; right sticky option panel with option groups; bottom or side summary of selected options and price.
- Option groups: material, skin tone, eyes, wig, head/body, skeleton, standing feet, heating, add-ons, outfit/accessories when available.
- Shopify implementation: use Shopify variants for options that create real variants. Use line item properties/metafields for custom details that do not map cleanly to variants.
- Upsells/cross-sells: show care kit, storage bag, cleaning supplies, extra wig, outfit, heating rod, repair kit, or warranty/inspection add-on where appropriate.
- Product page must still work for collectors: fast specs, price, delivery, add to cart, compare link, and human help without forcing quiz/configurator steps.
- Mobile layout: image first, then price/delivery/add to cart, then collapsible option groups. Use sticky bottom Add to Cart/Ask Help bar.

19.6 Doll Passport

Keep the public explanation simple: “Your doll comes with a clear details card and care record.” Internally this is the Doll Passport. Visually, it should feel like a premium flipbook/passport-style artifact, not a tech report.

- Include: doll photo, DollWow serial number, brand, model/body, height, material, selected options, purchase date/order date, warehouse/custom status, care tips, warranty/replacement notes, support contact, and optional QR/direct checkout or order link.
- For MVP: show as a beautiful section on product/order pages and optionally generate after order. Full flipbook/account version can be later.
- Do not imply legal/government identity. It is a product record, authenticity/care record, and ownership support artifact.

19.7 Supplier-ready website checklist

- Homepage must look live and premium, even if some products are sample/seed products.
- At least 20-50 clean products loaded with images, specs, price, options, delivery, and add-to-cart path.
- Working Shopify checkout path: product -> cart -> checkout URL.
- Working Compare page: can accept a URL and create a request/result, even if some results use manual fallback at first.
- Working Help Me Choose page: quiz can produce recommendations from sample products.
- Doll Warehouse page: ready-to-ship layout with “last updated” UI, even if stock is manually seeded first.
- Core policy pages: shipping, returns/replacements, discreet delivery, adult-only policy, FAQ, contact, why DollWow.
- Supplier pitch page: explain DollWow positioning, your prior category experience, traffic/acquisition plan, support quality, and what assets/authorization you need.

19.8 Codex design implementation checklist

- Create /lib/design/tokens.ts or Tailwind theme extensions for the locked black/gold palette.
- Build reusable components: GoldButton, DarkPanel, TrustBadge, PriceComparisonCard, ProductCard, ProductOptionPanel, SelectedOptionsStrip, DollDetailsCard, WarehouseStatusBadge.
- Do not hardcode pink/magenta from earlier mockups. Replace with gold/ivory design tokens.
- Create responsive homepage matching the black/gold reference mood and sections.
- Create configurable product page using the bouquet-builder layout pattern, adapted to dolls and Shopify product options.
- All customer-facing copy must stay eighth-grade/simple. Avoid internal jargon on the live site.
